Education

Georgia Institute of Technology May 2028
B.S. in Computer Engineering — Cybersecurity & Systems/Architecture — GPA: 4.0 *Atlanta, GA*

- Relevant Coursework: Data Structures & Algorithms, Hardware/Software Systems Programming
  In Progress: Computer Architecture, Cryptographic Hardware for Embedded Systems

Experience

Transpira Labs (Backed by Christopher Klaus) May 2026 – Present
Software Engineer *Atlanta, GA*

- Developed full-stack services for a platform to support 40+ expert contractors building frontier AI training data.
- Packaged 288 supply-chain benchmark tasks into a reproducible environment with deterministic rewards.
- Created a benchmark for LLM agents on their ability to RL train agents, revealing under 1% lift from instruction.

Nuntius (YC S'25) Sep. 2025 – Apr. 2026
Software Engineer *Remote*

- Directed a team of 8 engineers to deliver a $50K client project for evaluating LLM agent tool-use limitations.
- Built 5+ RL environments with automated graders and custom rewards; created 300+ adversarial tasks.
- Designed trajectory-aware evaluators assigning partial credit based on intermediate steps instead of binary results.

GT Propulsive Landers Jan. 2026 – Present
Guidance, Navigation, and Control Team Member — Python, Rust *Atlanta, GA*

- Automated PID tuning for a 1.8 kN engine simulation via 8 step-response metrics logged to CSV each run.
- Engineered sensor fusion pipelines with 3 distinct EKFs spanning IMU, GPS, and LIDAR to filter noisy inputs.
- Achieved a 0.63% average deviation from simulated ground-truth, demonstrating robust estimation accuracy.

Projects

Build: Scratch for RL Environments | *Python, TypeScript, HUD* Jun. 2026

- Won 1st of 70 ($50K+ in prizes/credits) at the HUD × Y Combinator Frontier/RSI RL Environments Hackathon.
- Developed an open-source Scratch-style platform compiling plain-language block trees into RL environments.
- Enabled anyone to evaluate models in custom simulations and launch RL training runs without writing any code.

Mathworks Math Modeling (M3) Champion | *Python, R* Mar. 2025 – May 2025

- Modeled Memphis heat resilience and electricity demand, winning 1st of 794 teams ($20,000 grand prize).
- Quantified vulnerability across 27 zip codes by reducing variables to 4 significant features via backward selection.
- Presented findings to Ph.D. professors and co-authored a publication in SIAM Undergraduate Research Online.

Volunteering

Science Olympiad National Team | *TypeScript, Web Development* Aug. 2025 – Present

- Open-source maintainer for the Codebusters platform used by 1,000+ coaches/volunteers nationwide.
- Volunteered and supported exam administration for 2,000+ students at state and national level tournaments.
- Member of the GT Alumni Chapter, organizing exam logistics for 40 teams at the GA State Tournament.

ScioVirtual Foundation Volunteer | *HTML, CSS, JS* Summers 2024 – 2026

- Volunteered 100+ hours teaching STEM courses to kids aged 11-14 for the ScioVirtual NonProfit Foundation.
- Created a cryptography training platform for 70+ students with feedback and automated solution verification.
- Achieved the highest-rated course by students among 20+ offerings and was named 2025 Instructor of the Year.

Technical Skills

Languages: Python, Java, Rust, C, TypeScript/JavaScript, SQL, R, MATLAB, HTML/CSS, Bash, LaTeX
AI/ML: RL Environment Creation, LLM Evaluation & Benchmarking, RLVR/GRPO, NVIDIA NeMo Gym
Tools & Systems: Docker, Git, Pydantic, Arduino, RISC-V, Control Systems, Sensor Fusion, Embedded Systems
Interests: Machine Learning, Cryptography, Cybersecurity, Aerospace Systems, Optics, Spanish (Intermediate)
