Education

Georgia Institute of Technology May 2028
B.S. in Computer Engineering — Cybersecurity & Systems/Architecture — GPA: 4.0 *Atlanta, GA*
- Relevant Coursework: Data Structures & Algorithms, Hardware/Software Systems Programming
  In Progress: Computer Architecture, Cryptographic Hardware for Embedded Systems

Experience

Arcophos (a16z sr008) Aug. 2026 – Present
Member of Technical Staff, Intern *San Francisco, CA*
- Owned and operated hospitals, deploying custom EHR systems to treat **100+ patients daily for free.**
- Built a clinical diagnostic benchmark from anonymized patient records with frontier LLM performance **<50%**.
- Built internal tooling for agent session and context management, saving each engineer **over 30 minutes** daily.

Transpira Labs May 2026 – Aug. 2026
Software Engineering Intern *Atlanta, GA*
- Maximized output of 40+ SMEs for frontier GDPval training data by building task authoring and QA pipelines.
- **Landed 5 pilot partners** by building a custom GTM platform for outreach, lead generation, and analytics.
- Built a sandbox replicating a 3PL's operational stack, **enabling end-to-end validation before deployment**.

Nuntius (YC S'25) Sep. 2025 – Apr. 2026
Software Engineering Intern *Remote*
- **Delivered $100k+ in projects** evaluating conversational tool-use LLM agents, directing a team of 8 engineers.
- Produced **300+ frontier tasks** across 10+ RL environments with automated graders and variable rewards.

GT Propulsive Landers Jan. 2026 – Present
Vice Lead — Guidance, Navigation, and Controls Subteam *Atlanta, GA*
- Achieved **0.63% average estimated deviation** from ground truth via EKFs fusing IMU, GPS, and LIDAR.
- Automated main throttle valve PID tuning for a 1.8 kN engine designed to both take off and land safely.

Projects

Build: Scratch for RL Environments | *Python, TypeScript* Jun. 2026
- **Won 1st of 70** ($50K+ in prizes/credits) at the Y Combinator Frontier/RSI RL Environments Hackathon.
- Developed an open-source Scratch-style platform compiling plain-language block trees into RL environments.
- Enabled anyone to evaluate models in custom simulations and launch RL training runs without writing any code.

Mathworks Math Modeling (M3) Champion | *Python, R* Mar. 2025 – May 2025
- Modeled Memphis heat and electricity demand, winning **1st of 794 teams internationally** ($20,000 prize).
- Quantified vulnerability across 27 zip codes by reducing variables to 4 significant features via backward selection.
- Presented findings live to professors and **co-authored a publication** in SIAM Undergraduate Research Online.

National Science Olympiad Developer | *TypeScript, Web Development* Aug. 2025 – Present
- Open-source maintainer for the Codebusters platform used by **1,000+ coaches/volunteers nationwide**.
- Volunteered and supported exam administration for **2,000+ students** at state and national level tournaments.

Technical Skills

Languages: Python, Java, Rust, C, TypeScript/JavaScript, SQL, R, MATLAB, HTML/CSS, Bash, LaTeX
AI/ML: RLVR/GRPO, RL Environment Creation, LLM Evaluation & Benchmarking, Synthetic Data, Knowledge Work
Tools & Systems: Docker, Git, Pydantic, Arduino, RISC-V, Control Systems, Sensor Fusion, Embedded Systems
Interests: Machine Learning, Cryptography, Cybersecurity, Aerospace Systems, Optics, Spanish (Intermediate)
